

Preschool Ecological Education Activities and Professional Teacher Training

Insects' Moving Castle to learn about Insect Pollinators

Insect pollinators are an essential part of the ecosystem. This workshop provides a creative and diverse learning experience for K3 kindergarten children. They will learn about the importance and behaviour of insect pollinators, turning misunderstanding or fear into curiosity! They will have hands-on handicraft making their own "Insect Hotel" to provide nurseries for solitary bees in the city to recover urban ecology.

1hour

30 kindergarten (K3) students

Classroom

Forest Walk and Learn to experience our local Forest

Nature is a fantastic classroom! Children or families are encouraged to slow down and explore the forests of Hong Kong. Through interactive games, the activity arouses children's interest to the environment surrounding them. They will learn about different elements inside a forest as well as observe and appreciate wildlife using their five senses.

Environmental Education Training for Teachers

Based on the Learning Area “Nature and Living” in the Kindergarten Education Curriculum Guide, this training is designed to enhance teachers' awareness of local ecology and biodiversity through interactive lectures, field trips and indoor workshops. The training aims to strengthen teachers' expertise in the theory and practice of environmental education, as well as to practice various teaching skills with useful examples of different teaching approaches.

About Us

<https://www.owlhk.org/>

Outdoor Wildlife Learning Hong Kong (OWLHK) is a professional environmental education organization established in 2016 and became a registered charity in Hong Kong (IR file no.: 91/16831). We aim at promoting conservation and environmental education in Hong Kong through outdoor education. Our environmental education activities are designed by our professional team in accordance with the developmental needs of young children and the local education curriculum. They are suitable for parent-children participation as well. Through interactive and self-motivated exploration educational activities, children can get in touch and connect with nature and cultivate an affection for environmental protection.

The arrangement of activities will be adjusted according to the needs of the school applicants. Welcome to contact us for more details!
